## 3. Lab Exercises

In the course there are three mandatory lab exercises. These labs are rather extensive and for them to be meaningful you need to prepare. For Lab2 and Lab3 there are mandatory home problems, which you must be able to present at the start of the laboration. The second lab exercise also starts with a short test, and you must answer the questions correctly to be allowed to participate in the laboration. Lab manuals are sold at KF-Sigma. No laboratory reports need to be written. The lab facilities are on the bottom floor in the M-building.

The labs are performed during the hours 8.15–12.00, 13.15–17.00. They are not included in the schedule from the LTH schedule generator. You need to sign up to do the labs. Signup lists are available on the course home page, see

[http://www.control.lth.se/Education/EngineeringProgram/FRT010\\_FIPi.html](http://www.control.lth.se/Education/EngineeringProgram/FRT010_FIPi.html)

The signup lists are open during the week before the lab starts. Note that you must sign up during this week. If you are unable to attend the lab you should report this to the

administrators or lab responsible. Persons that have missed signing up in time or been absent from a lab without proper cause will have to do the lab the next time the course is given. This is however often already in the next study period, since the same labs are used for most other programs.

Exercise 7 is a computer exercise and booked in the same way as the labs. This exercise is not mandatory, though highly recommended, and the booking is only to even out the load between the groups.

Lab	When	Signup	Responsible
1	week 2–3*	week 1	Christian Rosdahl
2	week 4–5	week 3	Tommy Nylander
3	week 6–7	week 5	Johan Grönqvist
Ex. 7	week 3	week 2	Bo Bernhardsson

\* week stands for course week, not week of the year

## 4. Interactive Computer Tools

In order to facilitate the learning and understanding of some of the concepts used in the course there are interactive computer tools available for free download from

[aer.ual.es/ilm/](http://aer.ual.es/ilm/)

The module *Modeling* is suitable for studying model descriptions. At exercise 7 you have the opportunity for supervised use of this module in our lab facilities.

## 5. Literature

The course is covered by 4 compendia sold by KF:

Reglerteknik AK – Föreläsningar (Lectures)  
Reglerteknik AK – Exempelsamling (Exercises and solutions)  
Reglerteknik AK – Laborationer (Lab manual)  
Reglerteknik – Formelsamling (Collection of formulae)

The compendia are also available for free download at [www.control.lth.se](http://www.control.lth.se). You are allowed to use the 'Formelsamling' on the exam.

For those interested in more reading we recommend Glad & Ljung: *Reglerteknik — Grundläggande teori* (Studentlitteratur 2006), Lennartson: *Reglerteknikens grunder* (Studentlitteratur 2002), or Åström & Murray: *Feedback Systems: An Introduction for Scientists and Engineers* (Princeton 2008), available for free at [www.cds.caltech.edu/~murray/amwiki](http://www.cds.caltech.edu/~murray/amwiki).

## 6. Exam

The written exam is 5 hours long. You may use 'Formelsamling', standard tables and calculators (not preprogrammed with e.g. Bode diagrams though), but you can not bring books or any notes. The grades are: fail, 3, 4 or 5.

The exam is on Tuesday March 17, 08–13 at MA:9-MA:10 (annex).
